

AirMobile joins PCI Security Standards Council.

Stockholm, Sweden – June 22, 2010- AirMobile AB, a leading provider of mobile wireless intrusion detection solutions, today announced that it has joined the PCI Security Standards Council.

The PCI DSS is applicable to any enterprise that processes payment cards - Wireless technologies are widely used in many of these industries, and unfortunately thefts and fraud of credit card holder's information over wireless connections are well documented.

AirMobile offers a wireless intrusion detection system that enforces the specific PCI DSS requirement for wireless security (PCI DSS 1.2) on a 24 x 7 basis or by recommended scan intervals not allowing any chance of thefts or leaks of payment card holder information.

"Wireless access means to criminals an easy access to valuable information, says Fredrik Robin Marketing Director at AirMobile AB. AirMobile services and products gives any enterprise that use wireless and process payments cards a cost effective and easy to implement solution based on mobile scanners such as PDA:s and a SQL reporting server." Our product will also help any organization who wants to automate and speed up Wi-Fi assessment scanning."

In 2010, 22 September AirMobile will participate at PCI SSC Community Meeting in Orlando, Florida and the October 19 PCI SSC meeting in Barcelona. AirMobile will be a vendor showcase exhibitor on both events.

AirMobile enable enterprises and organizations to protect networks from wireless security vulnerabilities, whether or not they deploy an own wireless network. AirMobile solution is a scalable, secure and cost-effective solution using mobile and static client based sensors to scan and position Wi-Fi devices. The AirMobile server generates reports and visualizes Wi-Fi networks on maps for distributed environments.

AirMobile AB is a privately held company based in Stockholm, Sweden. For more information www.airmobile.se
